#### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Albert Tsui on 10/27/2009.

The application has been amended as follows:

In the specification, the following is inserted at line 1:

The instant application is a 371 national phase application of PCT International Patent Application Number PCT US/03/35587, filed 11/07/2003, which claims priority to German Application Number DE 102 51 918 A1, filed 11/07/2002.

In the claims, the following claims are amended to read as follows:

Claims 1-10,23,25-34 and 47 are cancelled.

Claim 49. A method for targeting a heritable integration of a transgene within a genome of a somatic or germ line cell of an invertebrate organism, said method comprising:

integrating into said genome a first DNA cassette carrying a first transposon half side at one end, a second transposon half side in opposite orientation at the other end, a first wild-type, non-mutated recombinase target site, and a second, mutated recombinase target site that is heterospecific to the first recombinase target site, wherein the recombinase target sites are flanked by said transposon half sides,

catalyzing an exchange between said first DNA cassette for a second DNA cassette by introducing into the cell comprising said genome a site-specific recombinase that catalyzes a DNA recombination reaction between homospecific recombinase target sites and said second DNA cassette, said second DNA cassette comprising the same first, wild-type, non-mutated and second, mutated recombinase target sites in the same orientation as those of the first DNA cassette, an internal transposon half side flanked by said recombinase target sites, said internal half side being in the same orientation as the second transposon half side of the first DNA cassette, and the transgene positioned between said internal half side and the second, mutated recombinase site, to result in integration of the transgene into the genome; and

identifying that said transgene has been integrated into said genome.

Claim 52. The method of claim 49, wherein said first DNA cassette further comprises a marker gene coding region operably linked to a promoter DNA, said marker gene coding region being positioned between the recombinase target sites.

Claim 54. The method of claim 53, wherein said homing sequence comprises a *Drosophila* linotte homing sequence.

Claim 56. The method of claim 52, wherein said second cassette further comprises a second marker gene coding region lacking a promoter, and wherein, following the exchange between said first DNA cassette and said second DNA cassette, said second marker gene is placed under the control of the promoter of the first cassette.

Claim 58. The method of claim 49, wherein said second cassette further comprises a pair of phenotypically distinguishable marker genes flanking said internal half side and positioned between said first and second recombinase target sites.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Valarie Bertoglio whose telephone number is (571) 272-0725. The examiner can normally be reached on Mon-Thurs 5:30-4:00.
